

BT53 Datasheet

Amp'ed RF Technology, Inc.

BT53 Product Specification

13.5mm x 11.6mm x 2.6mm

Description

Amp'ed RF Technology presents the BT53 Smart Ready Bluetooth module supporting v4.1 Bluetooth Low Energy and Classic; dual mode. Including an integrated antenna, the BT53 provides a complete ready-to-use RF platform.

The BT53 is a surface mount PCB module, with pre-tested RF regulatory certifications improving time to market and reliability.

Fully integrated with our AmpedUP embedded protocol stack, the BT53 comes standard with our abSerial AT command interface and SPP profile. Many other profiles are available upon request.

Bluetooth features

- FCC & Bluetooth licensed radio
- Bluetooth v4.1
- Class 1 radio
- Range up to 80m LOS
- 1.5Mbps data throughput
- 128-bit encryption security

Hardware configuration

- Cortex-M4 microprocessor up to 84MHz
- 256K bytes Flash memory
- 64K bytes RAM memory
- UART, up to 2M baud
- SPI and I2C interfaces
- 7 general purpose I/O
- 4x12-bit A/D inputs
- 1 LPO input

Embedded software

- AmpedUP dual mode Bluetooth stack:
 - BT Classic and BT Low Energy
- abSerial, AT command set
- SDK, Software Development Kit (Optional)
- BlueGuard, data encryption software (Optional)
- Mobile application software (Optional)

1. Software Architecture

1.1. Lower Layer Stack

- Bluetooth v4.1, Classic and Low Energy
- Device power modes: active, sleep and deep sleep
- Wake on Bluetooth feature optimized power consumption of host CPU
- Authentication and encryption
- Encryption key length from 8 to 128 bits
- Persistent FLASH memory for BD Address and user parameter storage
- All ACL packet types.
- Bluetooth test modes per Bluetooth specification
- 802.11b/g/n co-existence: AFH
- Vendor specific HCI commands to support device configuration and certification test modes

1.2. Upper Layer Stack: Amp'ed UP

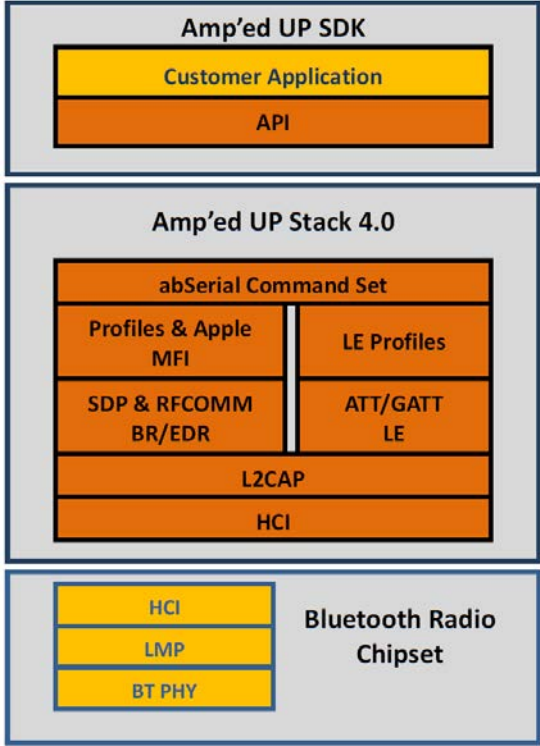

- SPP, GAP, ATT, GATT
- RFCOMM, SDP, and L2CAP

1.3. HCI Interface

- Bluetooth v4.1 specification compliant
- HCI UART transport layer (H4)

1.4. AT Command Set: abSerial

- Please see *abSerial Reference Guide* for details

2. Hardware Specifications

General Conditions (V_{IN} = 2.5V and 25°C)

2.1. Recommended Operating Conditions

Rating	Min	Typical	Max	Unit

 (edge tolerances + 0.4mm / - 0.2mm, height tolerance +/- 0.2mm)

3. Module Block Diagram

4. Hardware Design

Amp'ed RF modules support UART, USB, SPI, and GPIO hardware interfaces. Please note that the usage of these interfaces is dependent upon the firmware that is loaded into the module, and is beyond the scope of this document. The AT command interface uses the main UART by default.

Notes

- An external Low Power Oscillator is *required* on pin 15.
- All unused pins should be left floating; do not ground.
- All GND pins must be well grounded.
- The area around the antenna should be free of any ground planes, power planes, trace routings, or metal for at least 6 mm in all directions.
- Traces should not be routed underneath the module.

4.1. Module Reflow Installation

The BT53 is a surface mount Bluetooth module supplied on a 18 pin, 6-layer PCB. The final assembly recommended reflow profiles are:

For RoHS/Pb-free applications, Sn96.5/Ag3.0/Cu0.5 solder is recommended.

- Maximum peak temperature of 230° - 240°C (below 250°C).
- Maximum rise and fall slope after liquidous of < 2°C/second.
- Maximum rise and fall slope after liquidous of < 3°C/second.
- Maximum time at liquidous of 40 – 80 seconds.

4.2. GPIO Interface

All GPIOs are capable of sinking and sourcing 6mA of I/O current.

4.3. UART Interface

The UART is compatible with the 16550 industry standard. Four signals are provided with the UART interface. The TXD and RXD pins are used for data while the CTS and RTS pins are used for flow control.

Connection to Host Device

Typical RS232 Circuit

4.4. PCB Layout Guidelines

4.5. Reset Circuit

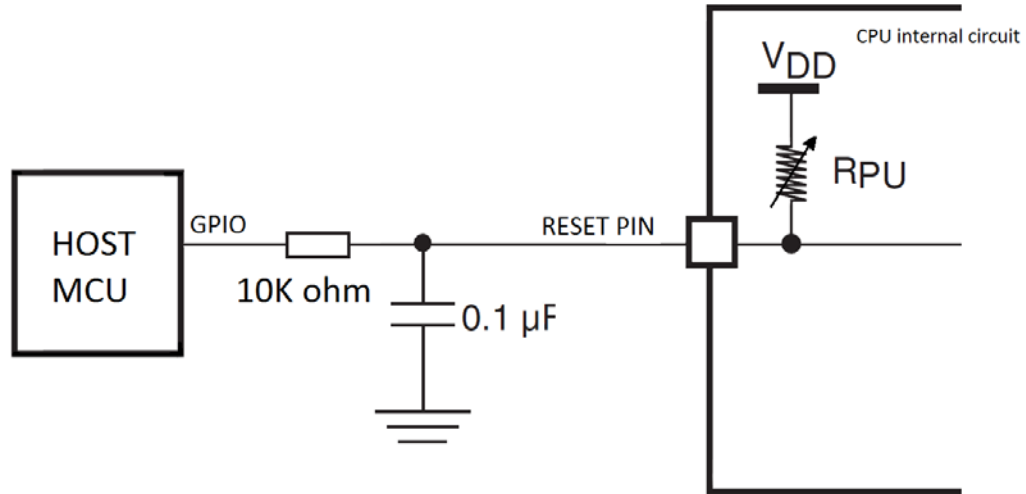

Two types of system reset circuits are detailed below:

4.5.1. External Reset Circuit:

Note: R_{PU} ranges from 30K ohm to 50K ohm internally.

4.5.2. Internal Reset Circuit:

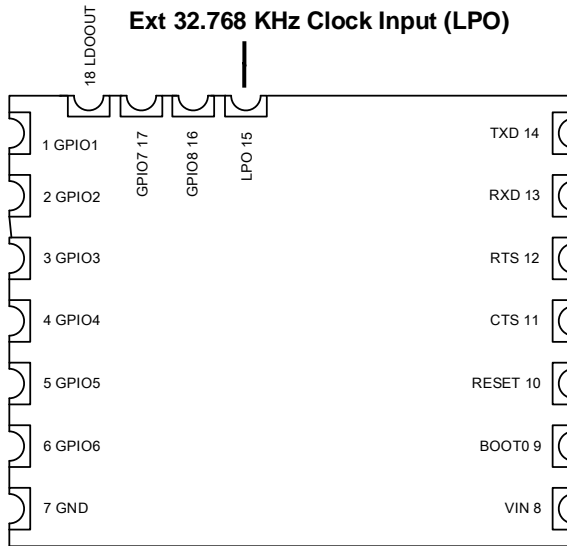

Notes:

- R_{PU} ranges from 30K ohm to 50K ohm internally.
- R_{RST} should be from 1K ohm to 10K ohm

4.6. External LPO Input Circuit

An external source must supply the slow clock and connect to the LPO pin (for example, the host or external crystal oscillator). The source must be a digital signal in the range of 0 to 1.8 V.

The accuracy of the slow clock frequency must be 32.768 KHz \pm 150 ppm for Bluetooth use.

LPO Parameters:

Frequency: 32.768 KHz

Tolerance: 150 ppm

Voltage Levels:

Low: 0.1 V

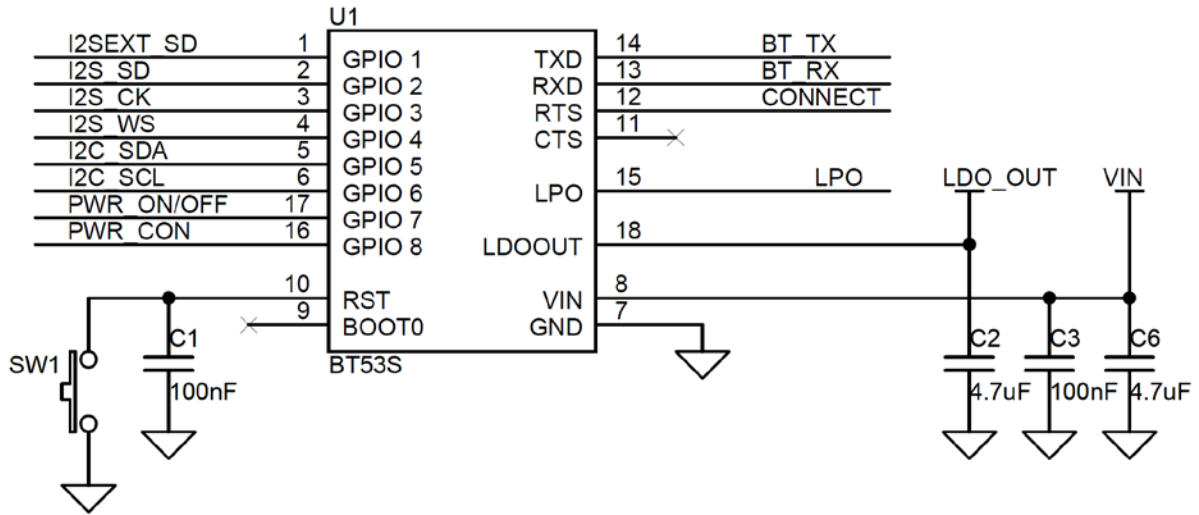

High: 1.8 V

Input Capacitance: 2.5 pF maximum

5. Regulatory Compliance

Federal Communications Commission statement:

This module has been tested and found to comply with the FCC Part15.

These limits are designed to provide reasonable protection against harmful interference in approved installations. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation.

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Modifications or changes to this equipment not expressly approved by Amp'ed RF Technology may void the user's authority to operate this equipment.

The modular transmitter must be equipped with either a permanently affixed label or must be capable of electronically displaying its FCC identification number

(A) If using a permanently affixed label, the modular transmitter must be labeled with its own FCC identification number, and, if the FCC identification number is not visible when the module

is installed inside another device, then the outside of the device into which the module is installed must also display a label referring to the enclosed module. This exterior label can use wording such as the following: "Contains Transmitter Module FCC ID: X3ZBTMOD8" or "Contains FCC ID: X3ZBTMOD8."

(B) If the modular transmitter uses an electronic display of the FCC identification number, the information must be readily accessible and visible on the modular transmitter or on the device in which it is installed. If the module is installed inside another device, then the outside of the device into which the module is installed must display a label referring to the enclosed module. This exterior label can use wording such as the following: "Contains FCC certified transmitter module(s)."

To satisfy FCC RF Exposure requirements for mobile and base station transmission devices, a separation distance of 20 cm or more should be maintained between the antenna of this device and persons during operation. To ensure compliance, operation at closer than this distance is not recommended. The antenna(s) used for this transmitter must not be co-located or operating in conjunction with any other antenna or transmitter.

Industry Canada statement:

Label of the end product:

The final end product must be labeled in a visible area with the following "Contains transmitter module IC: 8828A-MOD8"

This Class B digital apparatus complies with Canadian ICES-003.

Cet appareil numérique de la classe B est conforme à la norme NMB-003 du Canada.

This device complies with RSS-210 of the Industry Canada Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Ce dispositif est conforme à la norme CNR-210 d'Industrie Canada applicable aux appareils radio exempts de licence. Son fonctionnement est sujet aux deux conditions suivantes: (1) le dispositif ne doit pas produire de brouillage préjudiciable, et (2) ce dispositif doit accepter tout brouillage reçu, y compris un brouillage susceptible de provoquer un fonctionnement indésirable.

5.1. Modular Approval, FCC and IC

FCC ID: X3ZBTMOD8

IC: 8828A-MOD8

In accordance with FCC Part 15, the BT53 is listed above as a Modular Transmitter device.

5.2. FCC Label Instructions

The outside of final products that contain a BT53 device must display a label referring to the enclosed module. This exterior label can use wording such as the following:

Contains Transmitter Module

FCC ID: X3ZBTMOD8

IC: 8828A-MOD8

Any similar wording that expresses the same meaning may be used.

5.3. CE

Registration No.: RT 60099658 0001

Report No.: 17046060 001

5.4. Bluetooth Qualification

Declaration ID: D025845
