

---

	<b>Current</b>	<b>Previous</b>
Host CPU:	STM32F401	STM32F401
BT Controller:	CC2564/CG2905	CC2564/CG2905
Build Version:	141231C	141024C
abSerial:	1.7	1.7
Configure Vars:	1.7	1.6

**New Features**

1. Add new configuration parameter for iOS MFI: iAPAppIDStr. This is used for the request application launch feature.
2. Add config parameter BLEModemMode. This supports our GATT Modem/LeBypass usage case in demo mode and an alternative custom mode.
  - 0 Demo, battery service used for LeBypass
  - 1 Modem, custom service used for LeBypass
  - 2 Profile, no LeBypass allowed

**Enhancements**

1. Change default CPU speed to 12Mhz, from 8Mhz previously.
2. Improved high speed transmit performance.
3. Changed configuration behavior for ConnectionIntMin/Max, so that it's setting now takes effect after each reset.

**Bug Fixes**

1. Fixed a possible overclocking scenario.
2. Added host events to remote command mode.
